

Sharing via LTI

Using LTI

Learning Tools Interoperability (LTI) is a way of enabling secure integration between learning management systems (LMSs) and external tools so that information can be shared safely. LTI allows learning designers to plug-in external resources, content and activities available online into an LMS that may not have the capability of creating those resources.

To share a scenario via LTI you need to create a key and secret and share those details, along with the scenario link, with the receiving LMS. The steps below will show you how to create your key and secret and where to find your LTI share link.

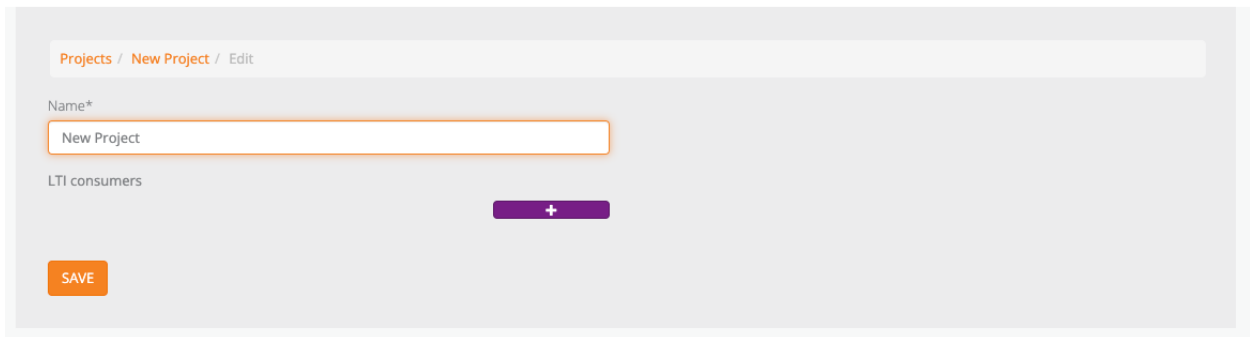

Steps

1. Open the project with the scenario that you want to link to an LMS via LTI
2. From the scenario list, click on the Project button and select Edit

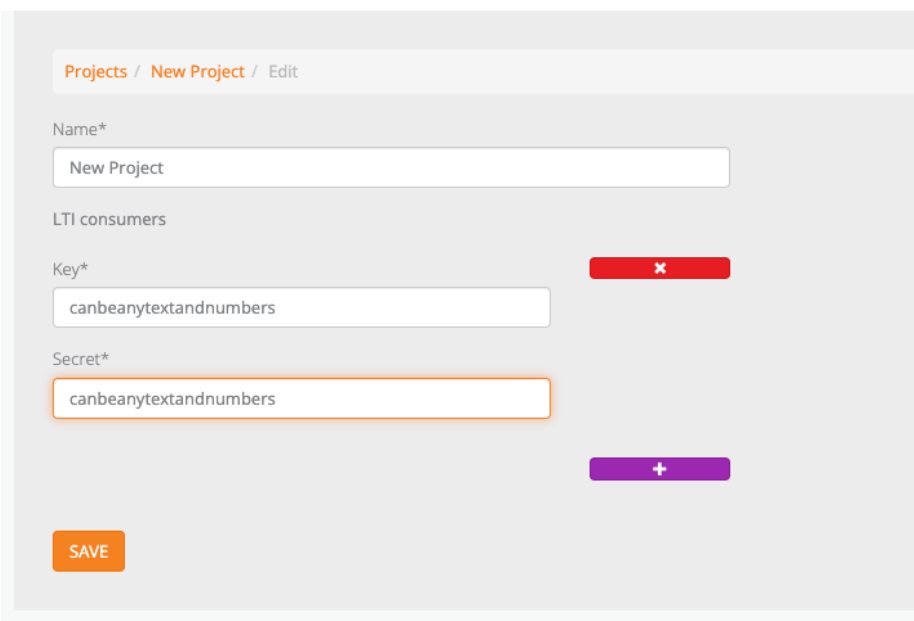

The screenshot shows the 'New Project' edit page. At the top, there is a breadcrumb trail: 'Projects / New Project / Edit'. Below this is a table with columns 'Name', 'Updated', and 'Created'. An orange button labeled 'ADD NEW SCENARIO' is positioned below the table. On the right side, there is a dropdown menu with 'Edit' and 'Delete' options, and a 'PROJECT' button with a downward arrow.

3. Click the purple plus button to create the LTI consumer credentials

The screenshot shows the page for creating LTI consumer credentials. It features a breadcrumb trail: 'Projects / New Project / Edit'. Below this is a form with a 'Name*' label and a text input field containing 'New Project'. Underneath the input field is the label 'LTI consumers' and a purple button with a white plus sign. At the bottom left, there is an orange 'SAVE' button.

4. Create a key and secret made up of letters (mix upper and lowercase) and numbers without spaces

5. Save and go to the Canvas of the scenario you'd like to embed in your LMS using LTI.
6. Select the share button and copy the LTI link

LTI launch URL

<https://near-life.io/launch/t/4/p/708/s/1117/g/1117>

7. You will need to share the key, secret and LTI link with your receiving LMS.
8. To add the LTI credentials to your LMS, refer to your LMS external tool instructions.

Here are a few quick links to integrating LTI with some popular LMSs: (please note that the instructions may change and the links may not work)
